MISSION: HIT THE MOON

Ape Troop is on a moon mission to help save humanity through blockchain-based charity donations generated from every trade of \$TROOP. We're bananas about making your \$TROOP bags grow through our reflective staking mechanism where you automagically earn more \$TROOP from every buy/sell of \$TROOP tokens, HODL \$TROOP and earn.

We understand what everyone wants so that is why we have implemented a **1% burn** of \$TROOP for every buy/sell transaction, this makes our token deflationary. It's simple economics: The less of something the more it is worth! meaning as our token supply is burned the value of the token should rise. Did we also mention NFT's?

OPERATION: HUMANITY

We believe that through blockchain-based philanthropy and governance, we can help to make a difference in the world we live in. That's why we set up a voting portal where all \$TROOP HODLERS can have their say on what charitable organizations we donate to. This is the core of what makes Ape Troop a project you should just #APE into.

GIVE BACK

NFTS: WE'RE BANANAS ABOUT THEM

We are super excited to be launching an NFT farm where the Ape Troop community can farm Ape Troop NFT's by staking their \$TROOP tokens via single-sided staking. This means that you do not need to add any form of liquidity into the TROOP/BNB liquidity pool to participate in NFT farming.

When you stake your \$TROOP tokens in our farm you will earn points, once you earn enough points you can then use them to redeem an NFT. Those who stake \$TROOP in the NFT farm will effectively be removing those \$TROOP tokens out of circulation whilst they farm, less \$TROOP in circulation means the price of our \$TROOP token has the potential to rise exponentially.

When you have farmed enough of our Ape Troop NFT's you can just un-stake your \$TROOP and move it back into your wallet.

\$TROOP

WHAT IT'S ALL ABOUT

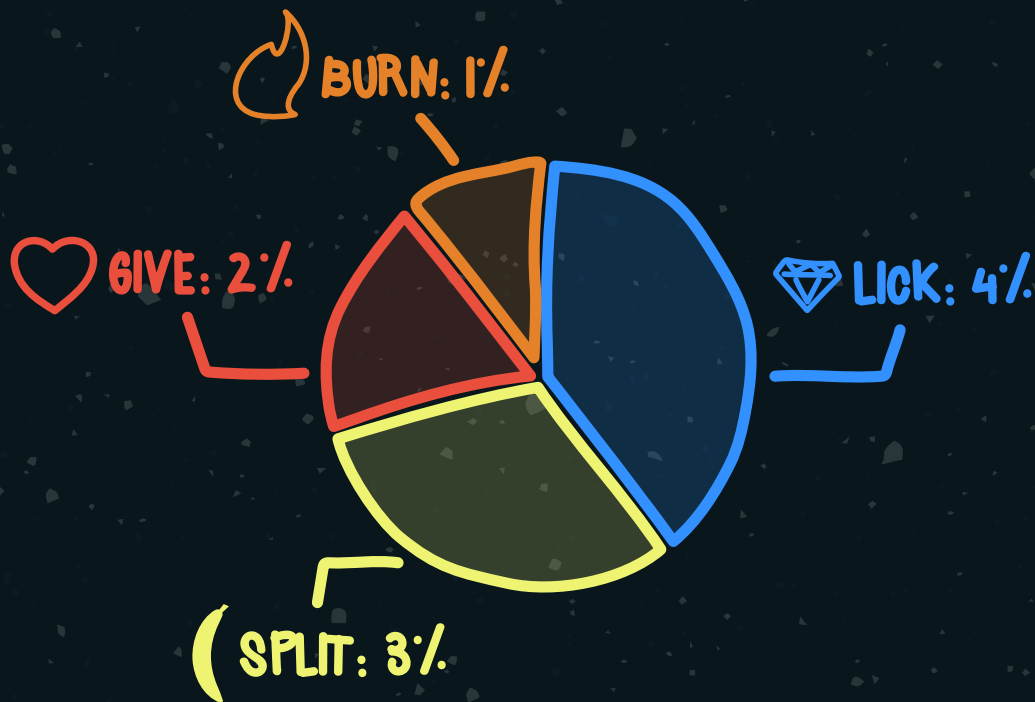

\$TROOP is our native token, we have integrated some cool features that we will cover below. Also, we have taken the necessary steps to ensure our Chief Dev has done his job properly and created our smart contract with some beautiful clean well-secured code, so we had our smart contract pre audited by RD Auditors.

VIEW THE PRE-AUDIT

TAXES YOU'LL LIKE

SOUNDS STRANGE, RIGHT?

As the chart above shows, we will have a 10% transaction on each Buy/Sell transaction that will be split in the following way.

LICK

4% Will go into the autogenerating liquidity pool, It's fair enough having a liquidity pool to trade into and out of but what IF we could make it so the liquidity pool could keep growing with every trade of \$TROOP? That's what our Chief Dev did, so now we will have a rising floor price through some solidity magic.

TAXES CONT'D

SPLIT

3% Is split amongst all \$TROOP holders in the form of static staking. So just HODL your \$TROOP and you will be rewarded with more automagically!

GIVE

2% Will go into a wallet designated for operation "HUMANITY" (charity donations) and marketing efforts. We all know that marketing costs a lot of moolah so it is essential for the longevity of the project that there are funds to support our cause. When our charity/marketing wallet reaches a predetermined level we will put proposals out for all \$TROOP HODLERS to vote on the marketing efforts and charities we put the funds to. If there is an excess of \$TROOP accumulated we can also put proposals forward to all \$TROOP HODLERS and ask if we should just burn a little which will see the \$TROOP total supply deflate at a faster rate.

BURN

1% Will be sent into the "Blackhole" which we call the "DEAD" wallet effectively burning \$TROOP so it can never be put back into circulation again, deflationary mechanisms will work to help the \$TROOP token keep appreciating in value over time.

DISTRIBUTION

KEEP IT SIMPLE

The \$TROOP tokenomic structure is very simple we will start with a 100 Quadrillion total supply, 50% will be burned to the DEAD wallet which will bring our final circulating supply to 500 Trillion \$TROOP.

Our token distribution is simple too, the 500 Trillion \$TROOP will be split in the following way:

55%

Will be allocated to our whitelisted presale

40%

Added into liquidity and locked for first 3 months

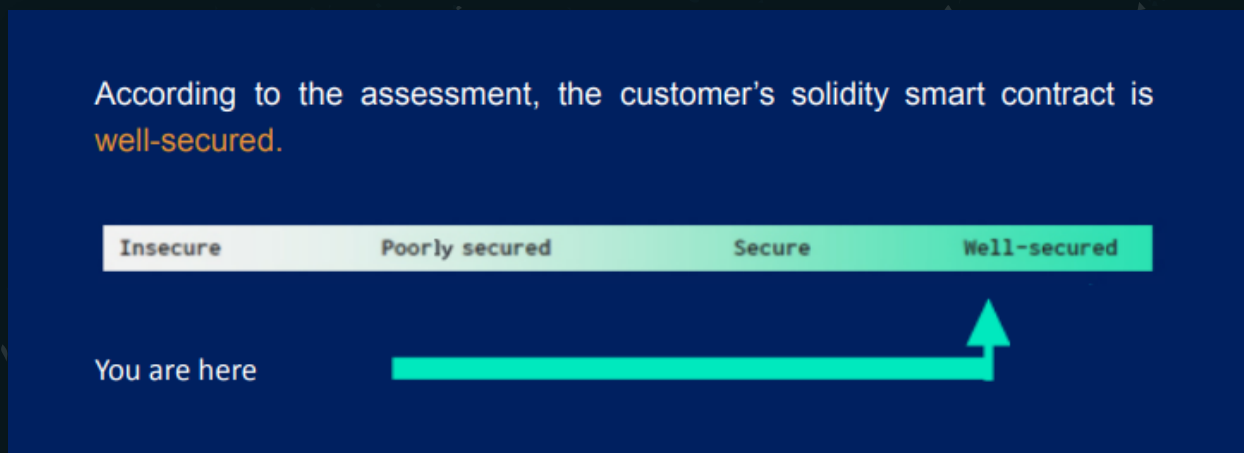

5%

Goes to a wallet for marketers and influencers

○ safety measure in case Pancakeswap is upgraded to V3

AUDITED FOR MAXIMUM COMFORT

As we mentioned before we had our smart contract pre audited by RD Auditors to ensure the code used adhered to the highest standards possible. As expected it was given the seal of approval and came back as “Well Secured” and safe to #APE.

This was just the first audit, we will have another audit completed after we have renounced our ownership. You can read the pre-audit here via our website.

PRE-SALE

EARLY APE GETS THE \$TROOP

We allocated 55% of the Final/Total Circulating supply towards our whitelisted presale. We successfully launched \$TROOP on the 1st July 2021. Everyone who filled out the presale whitelist went into a lottery, 55 participants were selected.

We had a hard cap of only 27.5BNB, the maximum amount that could be purchased per wallet was 0.5BNB worth but participants could send less if they would like to. Initially, there was ONLY (55) whitelisted spots available.

Whitelisted Pre-sale 275,000,000,000,000 \$TROOP

Hardcap 27.5BNB

Max Per Wallet 0.5BNB = 5,000,000,000,000 \$TROOP

Listing Price 1BNB = 10,000,000,000,000 \$TROOP

Liquidity 20BNB + 200,000,000,000,000 \$TROOP *

Initial MC @ TGE 20BNB (approx. 6500USD)

Of the 27.5BNB raised, 20BNB paired with 200,000,000,000,000 \$TROOP was put into the liquidity pool which was locked just after we launch for 3 months. The remaining 7.5BNB will be used for further marketing/audit expenses.

The listing price will be the same as the whitelisted pre-sale price which is 0.5BNB = 5,000,000,000,000 \$TROOP however we had anti-bot measures in place to prevent botting of our listing. Our initial market cap on the listing was approximately 6500USD or 20BNB.
